Maksym [Surname]

Third-year Mechanical Engineering student

[Email address] | github.com/iiMaximus

Third-year Mechanical Engineering student at Politecnico di Torino, expecting to graduate in July 2027. Independent work spans a custom carbon-fibre FPV drone designed in SolidWorks and three mobile apps. Longstanding interest in aircraft and aerospace.

EDUCATION

Politecnico di Torino

Third year

Bachelor's in Mechanical Engineering

Expected graduation: July 2027

[Add relevant coursework, thesis topic and academic results.]

SELECTED PROJECTS

Custom 5-inch FPV drone

Ongoing

Independently designed the frame and complete component layout in SolidWorks, then had the parts machined from carbon fibre. Integrated off-the-shelf propulsion, control and video components, with adjacent FC and ESC mounts.

[Add build photographs, measured mass and validated test results.]

Allergify, Absorb & Quarter

Development & distribution

Independently developed Allergify, Absorb and Quarter with AI-assisted coding. Now working on distribution of the food-information, study and planning apps.

[Add live links, release dates and verified usage figures when available.]

STUDENT TEAM EXPERIENCE

Squadra Corse PoliTO

Second year · 7-8 months

Cost & Manufacturing

Worked on bills of materials, manufacturing cost calculations and Excel documentation for the Formula Student team.

DRAFT PoliTO

First year · 1 year

Micro project

Contributed to basic drone design within the Micro project of the university's drone team.

TECHNICAL SKILLS & LANGUAGES

SolidWorks; component layout and mechanical integration; manufacturing cost calculations; bills of materials; Excel; AI-assisted app development.

[Languages and proficiency levels to be added.]
